No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB

The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostate chypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                        Peptide

Gonadotrophin releasing hormone; GnRH; synthetic immunogen; luteinising hormone releasing hormone; LHRH; contraceptive; promiscuous helper T-cell peptide epitope; immunomimic peptide epitope;
                                                                                                                                                                                                                                                                                                   The present sequence represents an LHRH-containing, invasin-free immunogenic peptide as above which can be used as a potent vaccine treating e.g. prostatic hyperplasia, androgen-dependent carcinoma, prostatic carcinoma, testicular carcinoma, endometriosis, benign uterine tumours, recurrent functional ovarian cysts, (severe)
                                                                                                                                                                                                                                                                                                                                                      a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component.
                                                                                                                                                                                                                                                                                                                                                                                                                      stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic Tlymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of
                                                                                                                                                                                                                                                                      premenstrual syndrome or oestrogen-dependent breast cancer, induction of infertility.

antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomLmic peptide epitope or its analogue. The synthetic lumnunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a peptide from circumsporozoite protein, CSP, a promiscuous helper T-cell peptide epitope used in the immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      breast cancer; uterine cancer; gynaecological cancer; endometriosis; uterine fibroid; benign prostatic hypertrophy; prostate cancer; circumsporozoite protein; CSP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAR82592-R82600 and AAR83560-R83581 are peptide immunogens that are useful in vaccines for treating allergic reactions. In the immunogens, an IGE CH4 peptide is attached C-terminally to a series of amino acids including a helper T cell epitope. The immunogen may also opt. contain a fatty acid or fatty acid derivative, an invasin domain or alpha-NH2. The immunogen produces high titrative, an invasin domain or alpha-NH2. The immunogen produces high titree of antibodies to the effector site in human IGE heavy chain (the CH4 domain peptide) which inhibit mast cell activation and reduce allergen-induced IGE prodn. The immunogens may be used in either a radially branching multimeric form or a linearly increase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

immunogen is useful inducing an immune response against GnRH in animal subject, and as such is useful as a contraceptive and in treatment of diseases such as cancer (of the breast, uterus and gynaecological cancer), endometriosis, uterine fibroids, benign hypertrophy and prostate cancer. The immunogen is effective in e high and specific anti-GnRH antibody titres. The present sequences as central fibraction of the immunogen is effective in example.
                                                                                                                                                                                                                                                                                                                                                                                                                  Glutamic acid; glutamine; vaccine; major histocompatibility com MHC; immunomodulator; antiallergic; endocrine; neuroprotectant; virucidal; bactericidal; antiparasitic; fungicidal; cytostatic; medicine; pharmaceutical; immune disorder; immune deficiency;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a pharmaceutical compound (I) that CC contains an N-terminal glutamic acid (Glu) or glutamine (Gln) residue in the form of an addition salt with a strong, physiologically CC acceptable acid (II). Also described are: (a) a pharmaceutical CC composition containing at least one (I); (b) a vaccine containing at least one (I); (b) a vaccine containing at least one (I); (b) a vaccine containing at least one (I); (c) a method for in vitro diagnosis of diseases associated CC with the presence of (Ia); (d) a kit for method (c) that includes a (Ia); (c) and (e) a process for preparing (I). (I) has immunomodulator, endocrine, and (e) a process for preparing (I). (I) has immunomodulator, endocrine, constitution of the presence of (Ia); (d) a kit for method (c) that includes a (Ia); (l) and (e) a process for preparing (I). (I) has immunomodulator, endocrine, consider of the presence of (Ia); (d) a kit for method (c) that includes a (Ia); (l) and (e) a process for preparing (I). (I) has immunomodulator, endocrine, consider of the process for preparing (I). (I) has immunomodulator, endocrine, consider of the process for preparing (I). (I) has immunomodulator, endocrine, consider of the preparing (I), (I) has immunomodulator, endocrine, in the preparing (I), (I) are useful, in human or consider of the preparing (Ia); (I) are useful, butterial, parasitic or fungal infections; or (ii) of cancers. A particular application is in anti-melanoma vaccines. (I) are also useful for in vitro diagnosis of considered with interactions between MHC and (I), e.g. melanoma considered with interactions between MHC and (I), e.g. melanoma considered with interactions between MHC and (I), e.g. melanoma considered with interactions between MHC and (I), e.g. melanoma considered with interactions between MHC and (I), e.g. melanoma considered with interactions between MHC and (I), e.g. melanoma considered with interactions between MHC and (I).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

AAR82571-91 are helper T cell epitopes which can be used in the preparation of a peptide immunogen that is useful in vaccines for treating allergic reactions. In the immunogen an IGE CH4 peptide is attached C-terminally to a series of amino acids including a helper T cell epitope. The immunogen may also opt. contain a fatty acid or fatty acid derivative, an invasin domain or alpha-NH2. The immunogen produces high titres of antibodies to the effector site in human IGE heavy chain (the CH4 domain peptide) which inhibit mas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide CS.T3 (residues 1-21) corresponds to residues 378-398 of the CS protein from P. falciparum but contains 2 Ala residues in place of the native protein's Cys residues at positions 384 and 389. Also claimed is AAP91504 (or modified forms, see FT) associated with an antigenic structure representing a B-cell epitope, pref. a multiple antigenic peptide, esp. multimers of the repeat sequences NANP present in P. falciparum CS protein.

                                                                                                                                                  A compsn. which induces a cytotoxic T lymphocyte (CTL) response to an antigen (Ag) in a mammal comprises, a CTL Ag response inducing peptide and a lipid conjugated helper T cell inducing peptide (i.e. AAR78918-R78922). The compsn. induces a CTL response to bacterial, viral or tumour Ags, and is therefore useful in the treatment and prevention of diseases associated with the Ag, e.g. hepatitis B.                                                                                                                                                                                                                                                                                                                                                      AAR75942 is derived from the sequence of the melanoma antigen (MAGE-3) protein and can be used to elicit a primary cytotoxic T lymphocyte response against cells expressing MAGE-3. Synthetic peptides AAR75945-53 can be used therapeutically to elicit CTL responses to melanoma, breast, colon, prostate, or other cells which express proteins with this epitope. The peptides have specific the Axpress proteins with this epitope. The peptides have specific the Axpress proteins at the peptides can be also used in vaccines, esp. combined with peptides such as AAR75955-56, which are T-helper epitopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunogenic peptide(s) that induce immune response to cancer cells - that express a MAGE-3 protein peptide epitope used in vaccines or adoptive immuno:therapy to induce cytotoxic T lymphocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  P. falciparum

The peptide immunogens of the invention can be used in vaccines for the immunotherapeutic treatment of allergenic reactions, including allergic rhinitis, food allergies, anaphylaxis, or virally-induced asthma. The immunogens overcome the short effective period of antihistamines, decongestants, and beta-2 agonists, while preventing the broad immunosuppression of corticosteroids. The peptides do not have the potential side effects of restlessness or sedation (associated with antihistamines), associated increased morbidity in asthmatics (as seen with beta-2 agonists) and adverse hormonal activities (observed in
                                                                                                                                                                                                                                                                                                                                                                                                                                            Non-dendritic peptide carrier linked to a solid phase - usefu diagnostic agent and as a scaffold for production of chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T-cell stimulatory peptide; immunogen; non-dendritic; carrier scaffold; inhibition; metastasis; wound healing; solid phase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            T-cell stimulatory peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0,
```

A non-dendritic peptide carrier (A) has been developed which is coupled through a linker to a solid phase, forming a complex of (A)-solid phase, where (A) comprises 10-50 amino acids capable of forming a secondary structure in a benign buffer after liberation from the solid phase, and further the (A)-solid phase complex comprises an immunogenic substance and/or an immuno mediator coupled on (A). The present sequence represents a specifically claimed T-cell stimulatory peptide from the

An (A)-solid phase complex can be used as a scaffold c for the production of chemical derivatives, characterised by covalently cc attaching molecules at attackment points. Alternatively (A) is used as cc a scaffold-peptide for the incorporation into an Immunostimulating c complex (Iscom) resulting an (A)-Iscom complex which is used for the cc chemical coupling of antigenic substances in an aqueous solution by cc conjugation. (A) derivatised with one or more peptides having c fibronectin-, laminin- or vitronectin-like binding activities can be cused for the promotion of cell-attachment to plastic surfaces, in c particular to inhibit tumour growth and metastasis, and for promotion c of wound healing. Also a derivatised (A) can be used for the selection c of specifically-binding aptamers or as a diagnostic agent. Such c diagnostic-(A) molecules could be used to detect molecules derived from c autoimmune or cancerous disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                           vectors which can be used to express tumour-associated antigens and cytokines, and thus induce immunity to cancer. The VEE virus vectors of the invention can be used prevent, treat, and protect against primary and metastatic neoplastic diseases, especially tumours such as lung cancer, breast cancer, ovarian cancer, prostate cancer, pancreatic cancer, gastric cancer, colon cancer, renal cancer, bladder cancer, melanoma, hepatoma, sarcoma and lymphoma. The present sequence is derived from the plasmodium falciparum CS protein, and can be fused with the target peptide of the invention to provide a
                                                                                                                                                                                                                                                                                                                                                           The specification describes venezuelan equine encephalitis (VEE) virus
                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: There are three distinct regions in the mature circumsporozoite protein, to oblo membrane-anchoring sequence.
C;Superfamily: circumsporozoite protein; thrombospondin type 1 repeat homology C;Reywords: sporozoite; surface antigen; tandem repeat
F;1-23/Domain: signal sequence #status predicted <SIG>
F;24-332/Product: circumsporozoite protein #status predicted <MAT>
F;94-189/Region: 8-residue repeats
F;99-230/Region: 2-residue repeats
F;258-310/Domain: thrombospondin type 1 repeat homology <THRI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              integrase-recombinase protein [imported] - Nostoc sp. (strain PCC 7120) plasmid pcC71 C; Species: Nostoc sp. PCC 7120
C; Species: Nostoc sp. PCC 7120
C; Species: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120
C; Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 09-Dec-2002
